A Short Glossary of Inclusive Language
Compiled by Susanne E. Craig and EeShan Bhatt

Words matter—that old adage that many of us may have heard as children,

Sticks and stones may break my bones,  
but words will never hurt me,  
is a harmful fallacy. In reality, the language we use has tremendous power to alienate, exclude, deride, humiliate, and wound.

On the other hand, thoughtful use of language can signal openness, inclusivity, admiration, and celebration, or simply be an expression of empathy and care for our fellow humans. As part of The Oceanography Society (TOS) Justice, Equity, Diversity, and Inclusion Committee’s series of columns in *Oceanography*, here we provide a glossary of terms that are often used while discussing topics such as race, ethnicity, gender, sexual orientation, and gender identity.

It should be explicitly stated that this list is neither definitive nor exhaustive. Indeed, the terms included here are likely heavily influenced by the authors’ own lived experiences and the lenses through which we see the world. Language is a living entity, a fluid social construct subject to rapid changes and overlaid with regional nuances. Indeed, what may be accurate and acceptable terminology for one person may be entirely unacceptable for another. Keeping this in mind, the following glossary is an attempt to group together some of the acronyms and phrases that are most commonly used today in social justice studies and bodies of work and that may have particular relevance to our community of ocean-related scientists, technologists, and stakeholders. We have borrowed heavily from a wide range of excellent existing scholarship and activism and have cited all sources used. We encourage the reader to follow the links to these multimedia resources and, perhaps, use them as teaching and discussion materials with your students, colleagues, and mentees. Finally, it is our hope that this glossary, along with the links provided to more comprehensive definitions and discussions, helps to define terms that you may have heard used, but not understood, and that it will serve to remind us of the power of the words we use in our everyday professional and personal lives.

We begin by defining the very words that form the name of our committee: *Justice, Equity, Diversity, and Inclusion* (JEDI).

**JUSTICE**

Justice is fairness in the way that people are treated. However, in the context we discuss it here, it is more correct to define social justice. This term can be formally defined in several ways and references therein, but the overarching principles common to all definitions are:

- Equal rights
- Equal opportunity
- Equal treatment

Or, in other words, social justice means equal rights and equitable opportunities for all.

When we think of implementing social justice in our communities, some examples might include correcting the racial, gender-based, socioeconomic, or geographical injustices and inequities that have created barriers to those entering our field, bringing to bear our professional capabilities in the field of environmental justice (see Table 1 for a definition of this term, which is strongly related to social justice), and/or confronting our relationship with colonial science (see Table 1 for a definition of decolonizing science).

**EQUITY**

Equity refers to fairness and justice and is distinguished from equality in that, whereas equality means providing the same to all, equity means recognizing that we do not all start from the same place and must acknowledge and make adjustments to counter imbalances (Figure 1). This is an ongoing process that requires us to identify and overcome intentional and unintentional barriers arising from bias or systemic structures.

<table>
<thead>
<tr>
<th>Term</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>AAPI</td>
<td>The many diverse groups of people with Asian, Asian American, or Pacific Islander ancestry.</td>
</tr>
<tr>
<td>Ally</td>
<td>In the social justice sense, allies are those who make the commitment and effort to recognize their privilege (based on gender, class, race, sexual identity, etc.) and work in solidarity with oppressed groups in the struggle for justice. Allies understand that it is in their own interest to end all forms of oppression, even those from which they may benefit in concrete ways.</td>
</tr>

</table>
| Bias       | Bias is a prejudice in favor of or against one thing, person, or group compared with another, usually in a way that is considered to be unfair. Biases may be held by an individual, a group, or an institution and can have negative or positive consequences. There are types of biases:  
  - **Conscious bias** (also known as explicit bias), and  
  - **Unconscious bias** (also known as implicit bias).  
  It is important to note that biases, conscious or unconscious, are not limited to ethnicity and race. Though racial bias and discrimination are well documented, biases may exist toward any social group. One’s age, gender, gender identity, physical abilities, religion, sexual orientation, weight, and many other characteristics are subject to bias.  
  **Unconscious biases** are social stereotypes about certain groups of people that individuals form outside their own conscious awareness. Everyone holds unconscious beliefs about various social and identity groups, and these biases stem from our tendency to organize social worlds by categorizing.  
  Unconscious bias is far more prevalent than conscious prejudice and is often incompatible with conscious values. Certain scenarios can activate unconscious attitudes and beliefs. For example, biases may be more prevalent when multitasking or working under time pressure. |
| BIPOC      | Black, Indigenous, and People of Color. Mostly used in North America. See references 7–10 for discussions on the origins of this term and its use. |
| BAME       | Black, Asian, and Minority Ethnic. Used in the UK, but see references 11–13 for recent discussions on the acceptability of its use. |
| BLM        | Black Lives Matter: A political movement to address systemic and state violence against African Americans. Per the Black Lives Matter organizers: “In 2013, three radical Black organizers—Alicia Garza, Patrisse Cullors, and Opal Tometi—created a Black-centered political will and movement building project called #BlackLivesMatter. It was in response to the acquittal of Trayvon Martin’s murderer, George Zimmerman. The project is now a member-led global network of more than 40 chapters. [Black Lives Matter] members organize and build local power to intervene in violence inflicted on Black communities by the state and vigilantes. Black Lives Matter is an ideological and political intervention in a world where Black lives are systematically and intentionally targeted for demise. It is an affirmation of Black folks’ humanity, our contributions to this society, and our resilience in the face of deadly oppression.” |
| Decolonizing Science | Decolonization is a movement to eliminate, or at least mitigate, the disproportionate legacy of White European thought and culture in education 15 [and science]. For further discussion and examples of the decolonialization of science, see references 16–18 and references therein. |
| Emotional Labor | First coined by American sociologist Arlie Hochschild in her 1983 book The Managed Heart: Commercialization of Human Feeling 19, emotional labor means to: “induce or suppress feeling in order to sustain the outward countenance that produces the proper state of mind in others.” Emotional labor involves the management of personal feelings and behaviors to align with institutional (or other organizational or individual) expectations, even when dealing with emotionally charged situations. It’s an often uncompensated, underappreciated, and overlooked form of labor that is performed in service to others. For example, in the context of race dialogues, either in the workplace or in more individual settings (e.g., with friends, family, or on social media), this can translate into minorities sharing some of their most painful experiences for the collective good, while being careful to manage their emotions so as not to make things awkward for others after the conversation.  
  “See reference 8 on use of the word “minority.” |
| Environmental Racism | Any policy, practice, or directive that differentially affects or disadvantages (whether intended or unintended) individuals, groups, or communities based on race. This term refers to how minority group neighborhoods, which are populated primarily by people of color and those from low socioeconomic backgrounds, are burdened with disproportionate numbers of hazards, including toxic waste facilities, garbage dumps, and other sources of environmental pollution and foul odors that lower the quality of life.  
  Examples of environmental racism include:  
  - The devastating pollution of the Boat Harbour water body (and surrounding airshed) in Nova Scotia, Canada—an ancestral fishing ground of the Mi’kmaq First Nation—by the discharging of effluent from a pulp mill 22 and extensive studies cited therein, and  
  - “Cancer Alley” in Louisiana, USA—a corridor of petrochemical plants that has polluted the surrounding water and air and subjected the mostly African American residents in St. James Parish to cancer, respiratory diseases, and other health problems. |
| Environmental Justice | The fair treatment and meaningful involvement of all people regardless of race, color, national origin, or income with respect to the development, implementation, and enforcement of environmental laws, regulations, and policies. The environmental justice movement grew out of a need to respond to environmental racism, and each global region has its own unique history of environmental justice development.  
  |  
| Ethnicity | A social construct that divides people into smaller social groups based on characteristics such as shared sense of group membership, values, behavioral patterns, language, political and economic interests, history, and ancestral geographical base.

<table>
<thead>
<tr>
<th>Term</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Gaslighting</strong></td>
<td>A gender-neutral English neologism, sometimes used to refer to people of Latin American cultural or ethnic identity in the United States. The “x” suffix replaces the “o”/“a” ending of Latino and Latina that are typical of grammatical gender in Spanish. Its plural is Latinxs. Words used for similar purposes include Latinitx, Latinx, and Latinidad.</td>
</tr>
<tr>
<td><strong>Generational Trauma</strong></td>
<td>Trauma that isn’t experienced just by one person but extends from one generation to the next. It is thought that the effects of the trauma can be passed from generation to generation in a number of ways that include learned beliefs, behaviors, and patterns, and genetic processes. Examples of populations affected by generational trauma include African Americans who are subjected to pervasive systemic racism, families of US indigenous and Canadian First Nations children forced into residential school systems, and families of Holocaust survivors.</td>
</tr>
<tr>
<td><strong>LGBTQI+</strong></td>
<td>Lesbian, Gay, Bisexual, Transgender, Queer, Intersex. The + indicates that there are identities beyond the six listed here that include, but are not limited to, Two Spirit, pansexual, omnisexual, asexual, and allies of these identity groups.</td>
</tr>
<tr>
<td><strong>Microaggression</strong></td>
<td>The everyday verbal, nonverbal, and environmental slights, snubs, or insults, whether intentional or unintentional, that communicate hostile, derogatory, or negative messages to target persons based solely upon their marginalized group membership.</td>
</tr>
</tbody>
</table>
| **Oppression**           | The systematic subjugation of one social group by a more powerful social group for the social, economic, and political benefit of the more powerful social group. Oppression exists when the following four conditions are met:  
  - The oppressor group has the power to define reality for themselves and others  
  - The target groups take in and internalize the negative messages about them and end up cooperating with the oppressors (thinking and acting like them)  
  - Genocide, harassment, and discrimination are systematic and institutionalized, so that individuals are not necessary to perpetuate it  
  - Members of both the oppressor and target groups are socialized to play their roles as normal and correct  

Oppression = Power + Prejudice |
| **Performative Allyship**| Performativeness is when someone from a non-marginalized group professes support and solidarity with a marginalized group in a way that either isn’t helpful or that actively harms that group. Performative allyship usually involves the “ally” receiving some kind of reward, for example, on social media—that virtual pat on the back for being a “good person” or “on the right side.” |
| **POC**                  | Person(s) of Color. While this term is affirming (in a way that non-White is not), there is significant variation of experiences among POC. In conversation, it is best practice to be as specific as possible and reciprocate the language any POC may use to describe themselves. |
| **Systemic Racism**      | Systems and structures that have procedures or processes that create disadvantages for people of color. It is the complex interaction of culture, policy, and institutions that holds in place the outcomes people of color see in their lives. Systemic racism is, essentially, naming the process of White supremacy. It creates disparities in many “success indicators,” including wealth, the criminal justice system, employment, housing, health care, politics, and education. The concept dates back to work done by scholar and civil rights pioneer W.E.B. Du Bois and was first named during the civil rights movement of the 1960s and was further refined in the 1980s. |
| **White Centering**      | White centering is the centering of White people, White values, White norms, and White feelings over everything and everyone else. |
| **White Fragility**      | A state in which even a minimum amount of racial stress becomes intolerable [for White people]—triggering a range of defensive responses. These responses include the outward display of emotions such as anger, fear, and guilt, and behaviors such as argumentation, silence, and leaving the stress-inducing situation. These behaviors, in turn, function to reinstate White racial equilibrium. |
| **White Privilege**      | Refers to the unquestioned and unearned set of advantages, entitlements, benefits, and choices bestowed on people solely because they are White. Generally, White people who experience such privilege do so without being conscious of it. |
DIVERSITY

Diversity is expressed in various forms, including race and ethnicity, gender and gender identity, sexual orientation, socioeconomic status, language, culture, national origin, religious commitments, age, disability status, ideas, perspectives, and values. Efforts to achieve diversity in a community are valuable, but they do not constitute a strategy to address inequity and injustice, and are criticized by many. For example, the US-based Baltimore Racial Justice Action states: "Diversity is silent on the subject of equity. In an anti-oppression context, therefore, the issue is not diversity, but rather equity. Often when people talk about diversity, they are thinking only of the "non-dominant" groups," and references therein.

In our oceanographic community, efforts to realize true diversity are sorely wanting, and acquiring and understanding data on diversity metrics is in its infancy. We must engage with our social science colleagues if we are to form a holistic understanding of the lack of diversity in oceanography and develop effective strategies to address it.

INCLUSION

Inclusion is the action or state of including or of being included within a group or structure. More than simply diversity and numerical representation, inclusion involves authentic and empowered participation and a true sense of belonging.
